INT. J. SYSTEMS SCI., 1993, VOL. 24, NO. 12, 2423–2429

SUBJECT INDEX (VOL. 24)

Actuator/sensor location method, 1027
Adaptive control, fuzzy, 301
Adaptive control scheme for a robot manipulator, direct decoupler and PID controller, 315
Adaptive decoupler for multivariable systems, 97
Algorithm
  for approximating the state of nonlinear systems, 777
  matrix stability region placement method generalization, 1391
Algorithms
  for integrated system optimization and parameter estimation, rationalization and application, 219
  learning type, for constructing rule-bases for multivariable fuzzy control by self-learning, 111
  least-square type, improving delay estimates, 745
  numerical, with condition and accuracy estimates, for linear systems design, 1473
Automata approach to multi-modal parameter optimization, 1669
Automatic control, use of quantum entropy of non-probabilistic matrices, 2271
Automation, of industrial processes, fuzzy control, 1849
Autonomous multi-agent systems, rule-based integration, 2117
Autonomous switching mode resonant inverter as limit cycle oscillator in disguise, 2199
Autoregressive model for a rotary cement kiln, 2187

Block oriented systems, identification by non-parametric techniques, 1049
Blood pressure control, application of rule-base construction for multivariable fuzzy control by self-learning, 129

Cancer diseases, optimal treatment, 1253
Canonical form observability for discrete-time affine non-linear systems, 769
Capital accumulation paths, optimal, for growth models with infinite planning horizon and non-convex technologies, 1339
Cell growth simulation, design philosophy, 2219
Chemical kinetics, fuzzy, algorithmic approach, 1363
Code, all undirectional, error-detecting, for universal applications, 1815
Codes, generative languages, and parallel processing, 2051
Coffee, market power effects on stocks and prices, 515
Computer system with fault margin, optimal testing policy, 1611
Context sensitive generative languages for parallel computing indexation, 2051
Continuous robust controller guaranteeing ESL for second-order dynamical systems, 2019
Continuous-time dynamical systems, integral equation models, 1589
Continuous-time systems with the cone-preserving property, positively invariant sets, 1037
Control rules construction for dynamic system: probabilistic qualitative models, lookahead and exaggeration, 1155
Controllability
  discrete time, of infinite-dimensional systems, frequency domain conditions, 231
  of linear hereditary systems with distributed commensurate delays, 33
Controllability grammian, relationship with closed-loop eigenvalues, single input case, 1133
Controller
  adaptive, variable-structure, decentralized, for large scale systems subjected to bounded disturbances, 1101
  fuzzy, for rotating oscillator, design, 1923
  optimal, disturbances-utilizing, for discrete-time systems, 669
Controllers
  GPC-type, state-space description, 1727
  optimal, 3-degree-of-freedom joint H_2/H_∞ type, 1803

Decentralized iterative learning control methods for large scale linear dynamic systems, 2239
Decentralized model-based control of class of large-scale interconnected systems, 499
Decentralized sensitivity of stochastic composite systems, 13
Decentralized variable-structure adaptive controller synthesis of large-scale systems subjected to bounded disturbances, 1101
Decoupling control, new technique, 289
Decoupling of input and output of non-linear systems using simple compensator of minimum order, 873
Design
  method for finite-dimensional decentralized VS-MRAC of nonlinear interconnected distributed parameter systems, 1165
  observer for discrete and continuous nonlinear stochastic systems, 2289
  of discrete linear time-dependent stochastic control systems, 1777
  of fuzzy controller for rotating oscillator, 1923
  of linear systems, using numerical algorithms with condition and accuracy estimates, 1473
  of multivariable control systems, expert system, 2345
  of windows for spectral analysis, method based on spline approximation, 1539
  regulator, multi-rate, for two-time-scale systems via digital redesign method, 691
  robust control system with state constraints, 193
  robust, of discrete systems via optimization, 797

self-organizing neural control system for dynamic processes, 1487
Developmental system models, multilevel development by parallel programming, 441
Differential-algebraic equations structure for control problems in mechanics, 2367
Differential equation, linear, solution in Chebyshev series, error bound, 1317
Differential equations, stochastic, with fractional brownian motion input, 1113
Diophantine equation, solution using application of implicit system feedback, 2399
Discrete large-scale uncertain systems, robustness of D-stability, 479
Discrete linear dynamic systems, fault detection by reduced-order generalized-likelihood-ratio method, 721
Discrete linear time-dependent stochastic systems, design, 1777
Discrete multivariable systems with non-linear time-varying unmodelled dynamics, robustness optimization, 79
Discrete singularly perturbed systems with prescribed degree of stability, near-optimum steady-state regulator, 1145
Discrete-time affine non-linear systems, canonical form observability, 769
Discrete-time controllability and stabilizability for infinite-dimensional systems, frequency-domain conditions, 231
Discrete-time infinite dimensional control systems, zeros of, 243
Discrete-time linear systems
root-clustering, perturbation bounds, 2205
state estimation with optimal selection of the output matrix, 1519
Discrete-time system optimal controller utilizing disturbances, 669
Discrete-time systems
robust design via optimization, 797
singular, positively invariant sets, 1687
Discrete variable structure control systems, 373
Distributed computing system, job scheduling approach based on a learning automaton, 1221
Distributed systems with quasi-sliding mode, nonlinear, finite-dimensional MRAC, 387
Disturbance rejection and tracking, perfect and imperfect, 2033
Dynamic processes, design of self-organizing neural control system, 1487
Dynamic state feedback control of two cooperative manipulators, 915
Dynamic systems
description from perspective of a network of interactions, 1301
optimal, forcasting by linear programming, 2229
parity vector approach for detecting failures, 805

Economic development with accumulation of physical capital and human capital, 65
Economic growth models and information theory, 403
Economics, measuring efficiency of dynamic input–output systems, 2159
Eigenstructure assignability using parametric output feedback, 1081
Eigenstructure assignment
in linear systems, recursive approach, 2255
in robot tracking applications, 1017
Eigenvalue clustering in subregions of the complex plane for interval dynamic systems, 901
Eigenvalues, close-loop, relationship with controllability grammian, single input case, 1133
Employment policies, derived social benefits assessment, 329
Entropy
conditional, theorem for recursive parameter estimation and its application to state estimation problems, 53
quantum, of non-probabilistic matrices, use in automatic control, 2271
Epidemic model, age-structured, with vaccination and a non-separable transmission coefficient, existence, threshold and stability results, 641
Error bound on the solution of a linear differential equation in Chebyshev series, 1317
Estimation of state of stochastic singular linear systems, convergence and stability, 1001
Estimation-of-state type schemes for fault detection and diagnosis in dynamic systems, 985
Evolution equations, controlled, under indeterminacy conditions, optimization, 2303
Expert system for the design of multivariable control systems, 2345
EXPMUL: an expert system for the design of multivariable control systems, 2345

Failure detection, identification and accommodation based on new accommodation filter, 1215
Failure detection in dynamic systems, parity vector approach, 805
Fault detection and diagnosis in dynamic systems, state estimation schemes, 985
Fault detection in linear discrete dynamic systems by reduced-order generalized-likelihood-ratio method, 721
Fault diagnosis and reconfiguration of systems using fuzzy logic, application to thermal plant, 1945
Fault tolerant control with switching strategy, 841
Feedback of dynamic state by controlling two cooperative manipulators, 915
Feedback, parametric output type, eigenstructure assignability, 1081
Finite dimensional MRAC of class of nonlinear distributed systems with quasi-sliding mode, 387
Finnish stock market, modelling time-series variation of earnings response coefficients, 829
Flexible structures, active damping via saturating acuators, 1621
Flight hardware procurement, reliability growth modelling, 1653
Frequency-domain conditions of discrete-time controllability and stabilizability for infinite-dimensional systems, 231

Frequency domain criteria
for robust stability of perturbed systems with uncoupled variations in odd and even coefficients, 1707
for strict aperiodicity of linear interval systems, 929
Fuzzy adaptive control, 301
Fuzzy and quantitative model-based control systems for robotic manipulators, 1863
Fuzzy chemical kinetics, algorithmic approach, 1363
Fuzzy control
in process automation, 1849
multivariable, constructing rule-bases by self-learning, system structure and learning algorithms, 111
of an inverted pendulum with fuzzy compensation of friction forces, 1915
of steam turbines, 1905
Fuzzy controller for rotating oscillator, design, 1923
Fuzzy logic control, 1825
Fuzzy logic control, application to autonomous robot systems, 1885
Fuzzy supervision and application to lean production, 1935
Fuzzy target recognition system with homomorphic invariant feature extraction, 1955

Generative languages, codes and parallel processing, 2051
Generator, synchronous, optimal variable structure stabilizer with uncertain parameters, 2207
Glucoregulatory system, human blood glucose metabolism, microcontroller-based real-time digital control, 1377
Goal programming, application to modelling and analysis of waste management in national planning, 957
Grey linear programming, solving approach, application, 159
Groups, autonomous, functioning, the role of delayed information, 1275

H_2/H_∞ mixed control under variance constraints, 1997
Hereditary systems, linear, with distributed commensurate delays, stabilizability, controllability and observability, 33
Human memory experiments, neural model, 1987

Identification and accommodation of failure detection based on new accommodation filter, 1215
Identification and adaptive control of SISO singular systems, 1791
Identification and modelling of manufacturing systems, decomposition stage, 1509
Identification of a class of continuous-time time-varying linear systems via block pulse functions, 1575
Identification of block orientated systems by non-parametric techniques, 1049
Identification of non-linear systems by recursive kernal regression estimates, 577
Indeterminacy conditions on controlled evolution equations, optimization, 2303
Infinite-dimensional control systems, discrete-time zeros of, 243
Infinite-dimensional systems, frequency-domain conditions of discrete-time controllability and stabilizability, 231
Information system, distributed, data assignment modelling and optimization, 173
Information theory and economic growth models, 403
Input–output assignment, balanced, 1027
Input–output decoupling of non-linear systems using simple compensator of minimum order, 873
Input–output economics system, dynamic, measuring efficiency, 2159
Integer programming problems, general, solution search method, 2321
Integral equation models for continuous dynamical systems, 1589
Integrated system optimization and parameter estimation algorithms, rationalization and application, 219
Integrators, p-step matrix type, with uncertainty in the continuous system model, robustness considerations, 943
Interconnected nonlinear distributed parameter systems, finite-dimensional decentralized VS-MRAC, 1165
Interconnected systems class, large-scale, decentralized model-based control, 499
Interval dynamic systems, eigenvalues clustering in subregions of the complex plane, 901
Interval systems, linear, frequency domain criteria for strict aperiodicity, 929
Inventory imbalances of finished goods, causes, in industrial firms that utilize a channel of distribution, structural equation approach, 529
Inventory theoretic determination of optimal shipping policy, 1265
Inverter, autonomous switching mode resonant type, as limit cycle oscillator in disguise, 2199

Job scheduling approach based on a learning automaton for a distributed computing system, 1221

Kalman filtering, modified, extended, for supervised learning, 1207
Kiln, for cement, rotary type, autoregressive model, 2187

Large-scale dynamic systems, decentralized iterative learning control methods, 2239
Large-scale system subjected to bounded disturbances, decentralized variable-structure adaptive controller synthesis, 1101
Learning action probabilities from delayed reinforcement, 2415
Learning algorithms for constructing rule-bases for multivariable fuzzy control by self-learning, 111
Learning automaton basis for job scheduling approach to distributed computing system, 1221

Learning control methods, iterative, decentralized, for large scale dynamic systems, 2239
Learning, supervised, modified extended Kalman filtering, 1207
Linear programming in the forecasting of optimal dynamic systems, 2229
Linear system
  continuous-time time-invariant type, transformation into a discrete-time time-invariant system, 1551
  design using numerical algorithms with condition and accuracy estimates, 1473
Linear systems
  continuous-time time-varying type, identification via block pulse functions, 1575
  discrete-time, state estimation with optimal selection of the output matrix, 1519
  eigenstructure assignment, recursive approach, 2255
  optimal, performance deterioration, 1300
Lot-sizing, multi-stage, with component lead times, echelon stock formulation, 1759

Manipulators, two, cooperative, dynamic state feedback control, 915
Manufacturing systems, modelling and identification, decomposition stage, 1509
Market power effects on stocks and prices of world coffee, 515
Market, thin security type, adjusting for the interval effect bias in beta coefficients, application of lag distribution model, 2391
Matrix stability region placement method, generalization, 1391
Measurement noise, spatially distributed, in stochastic robot forward dynamics, 419
Mechanics, differential-algebraic equations structure, for control problems, 2367
Microbial specific growth rate control via MRAC method, 1973
Microcontroller-based real-time digital control of slow processes with dead time, 1377
MIMO systems, linear, order reduction by Routh approximation method, 203
Model
  autoregressive type, for rotary cement kiln, 2187
  constrained minimax facility location type, quality locations, 1009
  lag distribution type, application to adjusting the interval effect bias in beta coefficients, on a thin security market, 2391
  neural type, for human memory, 1987
  of epidemic, age-structured, with vaccination and non-separable transmission coefficient, existence, threshold, and stability results, 641
Modelling
  and analysis of waste management in national planning using goal programming and physical system theory, 957
  and identification of manufacturing systems, decomposition stage, 1509
  and optimization of data assignment in distributed information system, 173
  of reliability growth, for procurement of flight hardware, 1653
Modelling the effect of demand variations on the performance of a production system, 1349
Modelling the time-series variation of earnings response coefficients in the Finnish stock market, 829
Model reduction
  of general queueing networks, 183
  of unstable systems, 2407
Models
  for developmental systems, multilevel development by parallel programming, 441
  integral equation type, for continuous-time dynamical systems, 1589
  of economic growth, information theory, 403
  probabilistic, qualitative, for constructing control rules for dynamic system, look-ahead and exaggeration, 1155
  reduced, bilinear for state observation of fixed-bed reactor, 2075
  state-space type, with coefficients in a diamond, stability margins, 2335
Monte Carlo optimization, multi-stage, applied to 600-point travelling salesman problem, 609
MRAC, finite-dimensional, of class of nonlinear distributed systems with quasi-sliding mode, 387
MRAC method for microbial specific growth rate, 1973
Multi-agent system, autonomous, rule-based integration, 2117
Multidimensional-singular systems, transfer matrix determination, 211
Multivariable adaptive control for a class of nonlinear systems, 1329
Multivariable feedback systems with time-varying nonlinear uncertainties, robust optimization, 599
Multivariable systems, adaptive decoupler, 97

Neural control system, self-organizing, design for dynamic processes, 1487
Neural learning action probabilities from delayed reinforcement, 2415
Neural model for human memory, 1987
Neural network, multi-layered, application to system identification, 1601
Neural networks, artificial, rule-based, 1415
Nonlinear system class, multivariable adaptive control, 1329
Nonlinear system identification by recursive kernal regression estimations, 577
Nonlinear system input–output decoupling using simple compensator of minimum order, 873
Nonlinear system state approximating algorithm, 777
Non-parametric approach to stochastic linear programming, 857

Observability
  canonical-form, for discrete-time affine nonlinear systems, 769
  of linear hereditary systems with distributed delays, 33

Observer design for discrete and continuous nonlinear stochastic systems, 2289
Optimal capital accumulation paths for growth models with infinite planning horizon and non-convex technologies, 1339
Optimal control for linear periodic systems using multirate piecewise constant sampled state feedback, 355
Optimization
of controlled evolution equations under indeterminacy conditions, 2303
of data assignment in distributed information system, 173
multi-modal, of parameters, automata approach, 1669
robust, of multivariable feedback systems with time-varying nonlinear uncertainties, 599
Optimum ordering policies with age-dependent minimal repair and two types of lead times, 253
Orbital transfer, aeroassisted, non-coplanar, neighbouring optimal guidance, 563
Order reduction of linear MIMO systems, Routh approximation method, 203
Ordering policies, optimal, with age dependent minimal repair and two types of lead times, 253
Oscillator, rotating, design of fuzzy controller, 1923
Output feedback control laws, physical realizability, 1403

Padé approximation, multipoint, of transfer functions, new matrix method, 809
Padé approximations, improving delay estimates, 745
Parameter identification, recursive, for a class of distributed parameter systems, simple method, 1439
Parameter optimization, multi-modal, by the automata approach, 1669
Parametric output feedback, eigenstructure assignability, 1081
Parity vector approach for detecting failures in dynamic systems, 805
Pendulum, inverted, double, symbolic open-loop characteristic equation, solution generation, 2379
Pendulum, inverted, fuzzy control with fuzzy compensation of friction forces, 1917
Periodic systems, linear, optimal control using multirate piecewise constant samples state feedback, 355
Perturbation bounds for root-clustering of linear discrete-time systems, 2205
Perturbed systems, with uncoupled variations in odd and even coefficients, robust stability, frequency domain criteria, 1707
Petri net subclass (POC net), application to timed Petri nets, 539
Physical system theory application to modelling and analysis of waste management in national planning, 957
Plants, non-identical, simple-integral, rendezvous problems, 1455
POC net, subclass of Petri nets, application to timed Petri nets, 539
Polynomial, 300 degree, simulation, 819
Portfolio efficiency tests based on stochastic dominance and co-integration, 2135
Power system, dynamic, generalized approach to mean first passage time, 2097
Predictive control, receding-horizon type, with exponential weighting, 1745
Process automation, fuzzy control, 1849
Production management, incentive and quality assurance, an agency theoretical perspective, 1233
Production process, lean, application of fuzzy supervision, 1935
Production strategies, optimal, for announced unit cost increases, 1
Production system performance, demand variation effect, modelling, 1349
Programming, linear
grey, solving approach, application, 159
in forecasting optimal dynamic systems, 2229
Programming problem, multiobjective, stochastic, approximation method, 789
Pulp cooking control using systems approach, 707
PWM control of robotic manipulators, 1423

Quality locations for the constrained minimax location model, 1009
Quantum entropy of non-probabilistic matrices, use in automatic control, 2271
Quasi-sliding mode nonlinear distributed systems, finite-dimensional MRAC, 387
Queueing networks, general, model reduction, 183
Queueing systems, $G/M/1/K$ and $M/G/1/K$ types, departure processes approximation, 627

Reactor, fixed-bed type, state observation based on reduced bilinear models, 2075
Receding-horizon predictive control with exponential weighting, 1745
Recognition of target, fuzzy, with homomorphic invariant feature extraction, 1955
Reconfiguration and fault diagnosis of systems using fuzzy logic, application to thermal plant, 1945
Recursive approach to assigning eigenstructure in linear systems, 2255
Regulator
multi-rate, design for two-time-scale-systems via digital redesign method, 691
near-optimum, steady-state, for discrete singularly perturbed systems with a prescribed degree of stability, 1145
Reliability growth modelling for procurement of flight hardware, 1653
Rendezvous problems, n non-identical simple-integral plants, 1455
Robot forward dynamics, stochastic, with spatially distributed measurement noise, 419
Robot manipulator, adaptive control scheme using direct decoupler and PID controller, 315
Robot systems, autonomous, applications of fuzzy logic control, 1885
Robot tracking applications, eigenstructure, assignment, 1017

Robotic manipulators
fuzzy and quantitative model-based control systems, 1863
pulse width modulated control, 1423
Robust control system design with state constraints, 193
Robust controller, continuous, guaranteeing ESL for second-order dynamical systems, 2019
Robust design of discrete-time systems via optimization, 797
Robust implementation of sliding mode control schemes, 733
Robust optimization of multivariable feedback systems with time-varying nonlinear uncertainties, 599
Robust stability
for linear uncertain time-delay systems with delay-dependence, 1067
of perturbed systems with uncoupled variations in odd and even coefficients, frequency domain criteria, 1707
Robust stabilization of uncertain linear dynamical systems, 265
Robustness considerations for p-step matrix integrators with uncertainty in the continuous system model, 943
Robustness of D-stability for discrete large-scale uncertain systems, 479
Robustness optimization of discrete multivariable systems with non-linear time-varying unmodelled dynamics, 79
Root-clustering of linear discrete-time systems, perturbation bounds, 2205
Routh approximation method applied to order reduction of linear MIMO systems, 203
Rule-based integration of autonomous multi-agent systems, 2117

Saturating actuator active damping of flexible structures, 1621
Second-order dynamical systems, continuous robust controller guaranteeing ESL, 2019
Security evaluation of dynamic power system, stochastic approach, 2097
Sensitivity, decentralized, of stochastic composite systems, 13
Sensor/actuator location method, 1027
Sets, positively invariant, for singular discrete-time systems, 1687
Shipping policy, optimal, determination by inventory theory, 1265
Simulation
accelerated time discrete event type, in distributed environment, 451
applied to a three hundred degree polynomial, 819
of cell growth, design philosophy, 2219
Singular discrete-time systems, positively invariant sets, 1687
Singular systems, SISO, identification and adaptive control, 1791
Singularly perturbed systems, closed-loop Stackelberg strategies, recursive approach, 887
SISO singular systems, identification and adaptive control, 1791
Sliding mode control schemes, robust implementation, 733
Sliding regime formation in optimal variable structure stabilizer with uncertain parameters for a synchronous generator, 2207
Slow process with dead time, microcontroller-based real-time digital control, 1377
Social benefits derived from employment policies, assessment, 329
Spectral analysis windows, design method based on spline approximation, 1539
D-stability robustness for discrete large-scale uncertain systems, 479
Stability margins of state space models with coefficients in a diamond, 2335
Stability regions, diamond and simplex, 757
Stability, robust, of linear uncertain time-delay systems with delay-dependence, 1067
Stabilizability
controllability and observability of linear hereditary systems with distributed commensurate delays, 33
discrete-time, of infinite-dimensional systems, frequency-domain conditions, 231
Stabilization
of uncertain time-delay systems with series nonlinearities, 2175
robust, of uncertain linear dynamical systems, 265
Stabilizer, variable structure, optimal, with uncertain parameters, for synchronous generator, sliding regime formation, 2207
Stackelberg strategies, closed-loop, for singularly perturbed systems, recursive approach, 887
Standby systems, n-unit priority, performance evaluation, 553
State approximating algorithm for non-linear systems, 777
State estimation
of stochastic singular linear systems, 345
of stochastic singular linear systems, convergence and stability, 1001
with optimal selection of the output matrix for discrete-time linear systems, 1519
State estimation problems, application of conditional entropy theorem for recursive parameter estimation, 53
State estimation schemes for fault detection and diagnosis in dynamic systems, 985
State observation of fixed-bed reactor based on reduced bilinear models, 2075
State-space description for GPC controllers, 1727
State-space models with coefficients in a diamond, stability margins, 2335
Stochastic approximation method for solving the stochastic multiobjective programming problem, 789
Stochastic composite systems, decentralized sensitivity, 13
Stochastic control systems, discrete, linear, time-dependent, design, 1777
Stochastic differential equations with fractional brownian motion input, 1113
Stochastic dominance and co-integration, basis for portfolio efficiency tests, 2135

Stochastic linear programming, non-parametric approach, 857
Stochastic robot forward dynamics with spatially distributed measurement noise, 419
Stochastic singular linear systems, state estimation, 345
Stochastic singular linear systems, state estimation, convergence and stability, 1001
Stochastic systems, discrete and continuous, nonlinear, observer design, 2289
Stock formulation, echelon-type, for multi-stage lot-sizing with component lead times, 1759
Stock market, Finnish, modelling time-series variation of earnings response coefficients, 829
System identification using multi-layered neural network, 1601

Target recognition system, fuzzy, with homomorphic invariant feature extraction, 1955
Thermal plant, application of fault diagnosis and reconfiguration of systems using fuzzy logic, 1945
Tracking and disturbance rejection, perfect and imperfect, 2033
Tracking control, precision type, characterization and compensation of discrete-time nonminimum-phase systems, 1189
Transfer functions, multipoint Padé approximation, new matrix method, 809
Transfer matrix of multidimensional-singular systems, determination, 211
Transformation of a continuous-time time-invariant linear system into a discrete one, 1551
Travelling salesman problem, 600-point, multistage Monte Carlo optimization, 609
Treatment, optimal, of cancer diseases, 1253
Turbines, steam type, fuzzy control, 1905

Uncertain linear dynamical systems, robust stabilization, 265
Uncertain linear time-delay systems with delay-dependence, robust stability, 1067
Uncertain systems, discrete, large-scale, robustness of D-stability, 479
Uncertain time-delay system with series nonlinearities, stabilization, 2175
Unknown delay estimation using least-square algorithms and Padé approximations, improvement, 745
Unstable systems, model reduction, 2407

Variable structure control systems, discrete, 373
Variable structure control using adaptive boundary of system uncertainty, 277
Variance constrained mixed H_2/H_∞ control, 1997

Waste management in national planning, modelling and analysis using goal programming and physical system theory, 957

Zeros of discrete-time infinite-dimensional control systems, 243

INT. J. SYSTEMS SCI., 1993, VOL. 24, NO. 12, 2431–2436
